PROJECTS

Netflix Clone Web Application
Personal Project – (GitHub)
- A Netflix clone built on React.js which uses firebase for authentication.
- For backend routing I used Express and the database is managed using MongoDB.
- **React, Firebase, MongoDB, Redux Toolkit, Node.js, Express**

Restaurant Website
Personal Project (Website) – (GitHub)
- Implemented Node.js and Express to allow functionality for the contact form on the careers page.
- Designed the overall website concept, layout, and deployed it on Render.
- Used: **HTML, CSS, JavaScript, Bootstrap, Node.js, Express**

To-Do List
Personal Project (Website) – (GitHub)
- Created a to-do list web app to add and delete tasks.
- Implemented MongoDB Atlas to store data of tasks.
- Used: **HTML, CSS, JavaScript, MongoDB Atlas, Node.js, EJS**

Recipe Search API
Personal Project (Website) – (GitHub)
- Created a website that can search for the recipes of thousands of dishes based on the ingredients entered with the TheMealDB API.
- Used: **HTML, CSS, JavaScript, API**
